both during undergraduate studies and as an element of finals examinations. Written by a small team of authors with extensive teaching experience, *100 Cases in Medical Data Interpretation* provides invaluable guidance from lecturers who understand from personal experience that detailed and accurate explanations are the key to successful revision. This book presents 100 cases arranged by specialty area—radiology, clinical chemistry, haematology and cardiology—as well as a random section of miscellaneous cases. Questions accompanying each case prompt the reader to consider how the data presented might be correctly understood. A clear discussion of how the correct answer was reached, with boxed highlights and bullet lists of key points, makes this book an excellent learning aid during all stages of clinical studies, and particularly while preparing for medical finals.

Written by senior clinicians across a range of specialties, *Data Interpretation for Medical Finals: Single Best Answer Questions* is the perfect way to prepare for data interpretation assessments and clinical practice. Featuring over 200 questions on key topics in medicine, each question is set around an image or investigation, such as an X-ray, CT scan, or blood film, and tests identification and interpretation of the data provided. Thorough explanation of the correct and incorrect answers helps you learn from mistakes. The questions reflect current exam question style and incorporate high quality images, many of which are annotated, and are presented in full colour throughout. *Data Interpretation for Medical Finals* will help build the confidence of all medical students, and Foundation Doctors, as it encourages application of investigation results to clinical decision making.

The ability to interpret and synthesise medical data is essential for doctors, yet it is a skill which can be difficult to master. *Data Interpretation Made Easy* focuses on developing this skill by presenting an array
