Co-published with img alt="" src="https://stylysub.presswarehouse.com/uploads/94563a6c54be934d016066ab9d6c4516ceb501ac.jpg" -- " While assessment may feel to constituents like an activity of accountability simply for accreditors, it is most appropriate to approach assessment as an activity of accountability for students. Assessment results that improve institutional effectiveness, heighten student learning, and better align resources serve to make institutions stronger for the benefit of their students, and those results also serve the institution or program well during the holistic evaluation required through accreditation." -- from the foreword by Heather Perfetti, President of the Middle States Commission on Higher Education Colleges and universities struggle to understand precisely what is being asked for by accreditors, and this book answers that question by sharing examples of success reported by schools specifically recommended by accreditors. This compendium gathers examples of assessment practice in twenty-four higher education institutions: twenty-three in the U.S. and one in Australia. All institutions represented in this book were suggested by their accreditor as having an effective assessment approach in one or more of the following assessment focused areas: assessment in the disciplines, co-curricular, course/program/institutional assessment, equity and inclusion, general education, online learning, program review, scholarship of teaching and learning, student learning, or technology. These examples recommended by accrediting agencies makes this a unique contribution to the assessment literature. The book is organized in four parts. Part One is focused on student learning and assessment and includes ten chapters. The primary focus for Part Two is student learning assessment from a disciplinary perspective and includes four chapters. Part Three has a faculty engagement and assessment focus, and Part Four includes four chapters on institutional effectiveness and assessment, with a focus on strategic planning. This book is a publication of the Association for the Assessment of Learning in Higher Education (AALHE), an organization of practitioners interested in using effective assessment practice to document and improve student learning.

This text provides higher education teachers with an overview of the many approaches to setting, marking and reviewing coursework, assignments, tests and examinations used in programmes for certificates, diplomas, first degrees or higher degrees. It discusses the influence of each on students.

Contextualising why assessment is still the single most important factor affecting student learning in higher education, this second edition of *Innovative Assessment in Higher Education: A Handbook for Academic Practitioners* offers a critical discourse about the value of assessment for learning alongside practical suggestions about how to enhance the student experience of assessment and feedback. With 17 new chapters this edition: contextualises assessment within the current higher education landscape; explores how student, parent and government expectations impact on assessment design; presents case studies on how to develop, incorporate and assess employability skills; reviews how technology and social media can be used to enhance assessment and feedback; provides examples and critical review of the use and development of feedback practices and how to assess professional, creative and performance-based subjects; offers guidance on how to develop assessment that is inclusive and enables all students to advance their potential. Bridging the gap between theory and the practical elements of assessment, *Innovative Assessment in Higher Education: A Handbook for Academic Practitioners* is an essential resource for busy academics looking to make a tangible difference to their academic practice and their students ' learning. This practical and accessible guide will aid both new and more experienced practitioners looking to learn more about how and why assessment in higher education can make such a difference to student learning.

**PLANNING AND ASSESSMENT IN HIGHER EDUCATION** Demonstrating Institutional Effectiveness In this era of increasing pressure on higher education institutions for accountability, Planning and Assessment in Higher Education is an essential resource for college and university leaders and staff charged with the task of providing evidence of institutional effectiveness. Michael F. Middaugh, a noted expert in the field, shows how colleges and universities can successfully measure student learning and institutional effectiveness and use these results to create more efficient communications with both internal and external constituencies as well as promote institutional effectiveness to support student learning. "How can the assessment of institutional effectiveness be used to provide a solid foundation for planning? Middaugh has crafted a comprehensive, practical guide that also explains what accrediting agencies really want and need to know about these topics." —Elizabeth H. Sibolski, executive vice president, Middle States Commission on Higher Education "Only Michael Middaugh, the unquestioned national leader in this field, could write such a lucid overview of how to make institutional assessment and planning really work as a tool rather than as a tedious requirement. He helped invent and shape the focus of national assessment rubrics and now offers his insights into how to make them work for your institution." —John C. Cavanaugh, chancellor, Pennsylvania State System of Higher Education "Middaugh provides extremely helpful and practical guidance and insights on how colleges and universities can use assessment tools and frameworks to improve both academic programs and administrative operations. A valuable and timely book for all higher education leaders." —James P. Honan, senior lecturer on education, Harvard Graduate School of Education

Co-published with AIR, img alt="" src="https://www.presswarehouse.com/sites/tylyus/images/airlogo1.jpg" Published in association with AAC&U img alt="" src="https://www.presswarehouse.com/sites/tylyus/images/AACUlogo.jpg" Assessment and accountability are now inescapable features of the landscape of higher education, and ensuring that these assessments are psychometrically sound has become a high priority for accrediting agencies and therefore also for higher education institutions. Bringing together the higher education assessment literature with the psychometric literature, this book focuses on how to practice sound assessment. This volume provides comprehensive and detailed descriptions of tools for and approaches to assessing student learning outcomes in higher education. The book is guided by the core purpose of assessment, which is to enable faculty, administrators, and student affairs professionals with the information they need to increase student learning by making changes in policies, curricula, and other programs. The book is divided into three sections: overview, assessment in higher education, and case studies. The central section looks at direct and indirect measures of student learning, and how to assure the validity, reliability, and fairness of both types. The first six chapters (the first two sections) alternate chapters written by experts in assessment in higher education and experts in psychometrics. The remaining three chapters are applications of assessment practices in three higher education institutions. Finally, the book includes a glossary of key terms in the field.

E-assessments of students profoundly influence their motivation and play a key role in the educational process. Adapting assessment techniques to current technological advancements allows for effective pedagogical practices, learning processes, and student engagement. The Handbook of Research on E-Assessment in Higher Education provides emerging perspectives on the theoretical and practical aspects of digital assessment techniques and applications within educational settings. Featuring coverage on a broad range of topics such as competency assessment, adaptive courseware, and learning performance, this publication is ideally designed for educational administrators, educational professionals, teachers and professors, researchers, and graduate-level students seeking current research on comparative studies and the pedagogical issues of online assessment in academic institutions.

Teachers spend much of their time on assessment, yet many higher education teachers have received minimal guidance on assessment design and marking. This means assessment can often be a source of stress and frustration. *Assessment and Feedback in Higher Education* aims to solve these problems. Offering a concise overview of assessment theory and practice, this guide provides teachers with the help they need.

Assessment plays an important role in improving learning, and this comprehensive book is designed to provide university teachers with an overview of the many approaches to setting, marking and reviewing coursework, assignments, tests and examinations. The authors aim to demonstrate the strong influence that assessment has on the way students approach their learning tasks and to highlight the importance of investigating how assessment is used in practice. In the light of the Dearing Report, it is now recognized that more emphasis should be placed on formative assessment as a means of improving learning, the type of skills required by assessors in higher education, and the support teachers require to achieve such skills. This handbook will be invaluable to all teachers involved in higher education, especially those who are dissatisfied with the assessment procedures they are using for setting and marking assignments, examinations and theses. Educational administrators, course developers and researchers will also find this a comprehensive review of research on the subject.

Assessment in Higher Education brings together in one place most of the major issues confronting higher education in the 1990s. These include enhancing student access, development, and success in higher education; transforming admissions testing to meet expanding educational needs; resolving the politics of accountability by assessing quality outcomes of higher education; assuring fair assessment responsive to human diversity; and facing the technological future of higher education. An integrative thread that weaves through all of these issues is the concept of equity, especially as it bears on social justice in education and on fairness in assessment. Another integrative thread is the role of computer and multimedia technology not only in improving the efficiency and power of all the functions of higher education assessment, but also in revolutionizing the delivery of higher education itself.

The first edition of *Assessing Student Learning* has become the standard reference for college faculty and administrators who are charged with the task of assessing student learning within their institutions. The second edition of this landmark book offers the same practical guidance and is designed to meet ever-increasing demands for improvement and accountability. This edition includes expanded coverage of vital assessment topics such as promoting an assessment culture, characteristics of good assessment, audiences for assessment, organizing and coordinating assessment, assessing attitudes and values, setting benchmarks and standards, and using results to inform and improve teaching, learning, planning, and decision making.
