Citizenship studies is at a crucial moment of globalizing as a field. What used to be mainly a European, North American, and Australian field has now expanded to major contributions featuring scholarship from Latin America, Asia, Africa, and the Middle East. The Routledge Handbook of Global Citizenship Studies takes into account this globalizing moment. At the same time, it considers how the global perspective exposes the strains and discords in the concept of 'citizenship' as it is understood today. With over fifty contributions from international, interdisciplinary experts, the Handbook features state-of-the-art analyses of the practices and enactments of citizenship across broad continental regions (Africas, Americas, Asias and Europes) as well as deterritorialized forms of citizenship (Diasporicity and Indigeneity). Through these analyses, the Handbook provides a deeper understanding of citizenship in both empirical and theoretical terms. This volume sets a new agenda for scholarly investigations of citizenship. Its wide-ranging contributions and clear, accessible style make it essential reading for students and scholars working on citizenship issues across the humanities and social sciences.

Democratic states guarantee free movement within their territory to all citizens, as a core right of citizenship. Similarly, the European Union guarantees EU citizens and members of their families the right to live and the right to work anywhere within EU territory. Such rights reflect the project of equality and undifferentiated individual rights for all who have the status of citizen, but they are not uncontested. Despite citizenship's promise of equality, barriers, incentives, and disincentives to free movement make some citizens more equal than others. This book challenges the normal way of thinking about freedom of movement by identifying the tensions between the formal ideals that governments, laws, and constitutions expound and actual practices, which fall short.

Nationalism has generated violence, bloodshed, and genocide, as well as patriotic sentiments that encourage people to help fellow citizens and place public responsibilities above personal interests. This study explores the contradictory character of African nationalism as it unfolded over decades of Tanzanian history in conflicts over public policies concerning the rights of citizens, foreigners, and the nation's Asian racial minority. These policy debates reflected a history of racial oppression and foreign domination and were shaped by a quest for economic development, racial justice, and national self-reliance.

politics of environmental degradation and sustainability. Toward A Bioregional State is his novel approach to development and to sustainability. He proposes that instead of sustainability being an issue of population scale, managerial economics, or technocratic planning, an overhaul of formal democratic institutions is required. This is because environmental degradation has more to do with the biased interactions of formal institutions and informal corruption. Because of corruption, we have environmental degradation. Current formal democratic institutions of states are forms of informal gatekeeping, and as such, intentionally maintain democracy as ecologically "out of sync". He argues that we are unable to reach sustainability without a host of additional ecological checks and balances. These ecological checks and balances would demote corrupt uses of formal institutions by removing capacities for gatekeeping against democratic feedback. Sustainability is a politics that is already here-only waiting to be formally organized.

Citizenship is at the heart of our contemporary world but it is a particular vision of national citizenship forged in the French Revolution. In *Citizens without Nations*, Maarten Prak recovers the much longer tradition of urban citizenship across the medieval and early modern world. Ranging from Europe and the American colonies to China and the Middle East, he reveals how the role of 'ordinary people' in urban politics has been systematically underestimated and how civic institutions such as neighbourhood associations, craft guilds, confraternities and civic militias helped shape local and state politics. By destroying this local form of citizenship, the French Revolution initially made Europe less, rather than more democratic. Understanding citizenship's longer-term history allows us to change the way we conceive of its future, rethink what it is that makes some societies more successful than others, and whether there are fundamental differences between European and non-European societies.

Groundbreaking empirical study of voting by resident aliens in established democracies.

In this book, Howard addresses immigrant integration, one of the most critical challenges facing European countries, the resolution of which will in large part depend on how foreigners can become citizens. Howard's research shows that despite remarkable convergence in their economic, judicial, and social policies, the countries of the European Union still maintain very different definitions of citizenship. Based on an innovative measure of national citizenship policies, the book accounts for both historical variation and contemporary change. Howard's historical explanation highlights the legacies of colonialism and early democratization, which unintentionally created relatively inclusive citizenship regimes. Howard's argument focuses on the politics of citizenship, showing in particular how anti-immigrant public opinion - when activated politically, usually by far right movements or public referenda - can block the liberalizing tendencies of political elites. Overall, the book shows the far-reaching implications of this growing and volatile issue.
