High-velocity change is the fundamental challenge facing companies today. Few companies, however, are prepared to continuously innovate-because they focus on the short-term and do not emphasize the wisdom needed to make sure that their interests are aligned with those of society. Practical wisdom is the bases of continuous innovation, where

companies ceaselessly and repeatedly creating new knowledge, disseminating it throughout the organization, and converting knowledge to action over time. In *The Wise Company*, legendary management experts Ikujiro Nonaka and Hirotaka Takeuchi highlight how various companies have confronted the challenge of rapid change to create new products and new ways of doing business that benefit employees, consumers, and society. The key: a relentless self-renewal process where companies realize the future they envision, rather than only responding to changes in the environment. Nonaka and Takeuchi argue that while knowledge-creating companies focusing on tacit and explicit knowledge can generate innovation, they cannot create it on a continuous and ongoing basis without having wisdom about

Companies that have resilience, longevity, and sustainability share a number of characteristics, Nonaka and Takeuchi show. Strategies are based on alignment of organizational and societal benefits. Leaders grasp the core of any situation or problem quickly, and intuitively comprehend the nature and meaning of people, things, and events. But wise leadership is not enough: wisdom must infuse the organization through informal as well as formal shared interactions and communications that focus on metaphors and stories that convey the essence and meaning of strategies and actions. In short, Nonaka and Takeuchi demonstrate how continuous innovation results from companies ceaselessly and

What if everything you know about raw talent, hard work, and great performance is wrong? Few, if any, of the people around you are truly great at what they do. But why aren't they? Why don't they manage businesses like Jack Welch or Andy Grove, play golf like Tiger Woods or play the violin like Itzhak Perlman? Asked to explain why a few people truly excel, most of us offer one of two answers: hard work or a natural talent. However, scientific evidence doesn't support the notion that specific natural talents make great performers.

In one of the most popular Fortune articles in years, Geoff Colvin offered new evidence that top performers in any field - from Tiger Woods and Winston Churchill to Warren Buffett and Jack Welch - are not determined by their inborn talents. Greatness doesn't come from DNA but from practice and perseverance honed over decades. And not just plain old hard work, but a very specific kind of work. The key is how you practice, how you analyze the results of your progress and learn from your mistakes, that enables you to achieve greatness. Now Colvin has expanded his article with much more scientific background and real-life examples. He shows that the skills of business - negotiating deals, evaluating financial statements, and all the rest - obey the principles that lead to greatness, so that anyone can get better at them with

the right kind of effort. Even the hardest decisions and interactions can be systematically improved. This new mindset, combined with Colvin's practical advice, will change the way you think about your job and career - and will inspire you to achieve more in all you do.

The text then includes solutions to these problems, through which algebraic techniques are taught. Important facts and powerful problem solving approaches are highlighted throughout the text. In addition to the instructional material, the book contains well over 1000 problems. The solutions manual contains full solutions to all of the problems, not just answers.
