Traces the history of earth moving equipment, looks at cable excavators, mining shovels and draglines, walking draglines, and hydraulic backhoes, and discusses the manufacture of large excavation equipment

Join the Stickmen on a fascinating tour of monster vehicles, transporters, and construction tools. You'll discover some of the largest machines in existence and see the Stickmen (accidentally) test the limits of gravity!

AEC, Bristol, Crossley, Daimler, Dennis, Leyland and others were all manufacturers of passenger vehicle chassis which could be seen throughout the country in the years following the end of World War Two. They produced a wide range of double deck and single deck buses and coaches, bodied by a considerable number of body builders. With the exception of Dennis, all those chassis makers have now disappeared, along with nearly all the body builders. In addition, most operators of this variety of vehicles are no longer in existence, being primarily absorbed into larger operations. This book can only give a small indication of the major role Steve and his Quantock Heritage fleet have played in preserving not only part of the engineering history of this country, but its effect also on social history. In practical terms he has displayed this by enabling the general public to see, enjoy, and also use vehicles of a bygone era.

To extract maximum performance, an engine needs an efficient, well-designed, and properly tuned exhaust system. In fact, the exhaust system's design, components, and materials have a large impact on the overall performance of the engine. Engine builders and car owners need to carefully consider the exhaust layout, select the parts, and fabricate the exhaust system that delivers the best performance for car and particular application. Master engine builder and award-winning writer Mike Mavrigian explains exhaust system principles, function, and components in clear and concise language. He then details how to design, fabricate, and fit exhaust systems to classic street cars as well as for special and racing applications. Air/exhaust-gas flow dynamics and exhaust system design are explained. Cam duration and overlap are also analyzed to determine how an engine breathes in air/fuel, as the exhaust must efficiently manage this burned mixture. Pipe bending is a science as well as art and you're shown how to effectively crush and mandrel bend exhaust pipe to fit your header/manifold and chassis combination. Header tube diameter and length is taken into account, as well as the most efficient catalytic converters and resonators for achieving your performance goals. In addition, Mavrigian covers the special exhaust system requirements for supercharged and turbocharged systems. When building a high-performance engine, you need a high-performance exhaust system that's tuned and fitted to that engine so you can realize maximum performance. This comprehensive book is your guide to achieving ultimate exhaust system performance. It shows you how to fabricate a system for custom applications and to fit the correct prefabricated system to your car. No other book on the market is solely dedicated to fabricating and fitting an exhaust system in high-performance applications.

Douglas Coupland takes his sparkling literary talent in a new direction with this crackling collection of takes on life and death in North America -- from his sweeping portrait of Grateful Dead culture to the deaths of Kurt Cobain, Marilyn Monroe and the middle class. For years, Coupland's razor-sharp insights into what it means to be human in an age of technology have garnered the highest praise from fans and critics alike. At last, Coupland has assembled a wide variety of stories and personal "postcards" about pivotal people and places that have defined our modern lives. Polaroids from the Dead is a skillful combination of stories, fact and fiction -- keen outtakes on life in the late 20th century, exploring the recent past and a society obsessed with celebrity, crime and death. Princess Diana, Nicole Brown Simpson and Madonna are but some of the people scrutinized.

For the first time the story that is taught in business schools around the world is told from the inside. Haier purpose is a comprehensive guide to the strategies and innovation that made Haier the global phenomenon that it is today.

A must for all ERF fans, this is the third and final installment in The Lorries of Arabia series. While the first book paid tribute to ERF's world-class long-haulers in the Middle East and those who drove them and the second book went on to explore the fortunes of this legendary machine, this final volume is a continued narration of an unfolding history in the 1970s and 1980s of a premium tractive unit model. With new findings, new details, new insights, and new pictures, readers of the first two books will surely enjoy the final volume of this acclaimed series. Containing a full register of all the 91 NGCs known to have ever been built, this is the enthusiast's guide to the rugged, reliable, left-hand drive tractive unit forever associated with long-haul European and Middle Eastern routes of the 70s and 80s.
