Cardiac arrest is a clinical diagnosis: • Suspect cardiac arrest in any patient who is unconscious and who does not have signs of life. If you check a pulse, examine only for a major (carotid or femoral) one and take no longer than 10sec. Other ' confirmatory ' clinical features (eg colour, pupil size/response) waste time and do not help.

This book is primarily for pediatric and adult emergency room physicians, primary care providers, hospitalists, and nurses. It will also be useful for critical care specialists, cardiologists and trainees at all levels. Cardiac Emergencies in Children describes the pathophysiology of a diverse group of congenital and acquired heart conditions and presents a therapeutic rationale for treating children presenting with these conditions under life-threatening conditions. The book discusses the effects of surgery on hemodynamics and how to manage these effects. Also described are the daily challenges faced by physicians, including identifying a child with heart disease, interpreting chest radiographs, ECGs, and laboratory findings, and beginning appropriate therapies.

Fully revised and updated, the Oxford Handbook of Emergency Medicine is the definitive, best-selling guide for all of the common conditions that present to the emergency department.
