The 1E foundation is comprised of the Board and the Executive Team. But we don't place success just at the top: all of the employees across all of the offices are of the highest caliber. We believe in finding the best talent to offer the best service. Board members. Sumir Karayi .

POCKETBOOK OF NEUROLOGICAL PHYSIOTHERAPY is designed for working with people with neurological problems in any clinical setting. Written by a team of expert contributors, it offers an international perspective on core concepts, irrespective of philosophical frameworks or health care systems. Rapid access to essential information is contained in one concise volume, providing expert knowledge and advice at your fingertips. This pocketbook is a valuable guide to evidence-based practice for student physiotherapists and their teachers, as well as qualified clinicians. Background Knowledge including common neurological conditions, neural plasticity, and common motor impairments and their impact on activity Clinical Decision Making including assessment and treatment of the acute patient before and during stabilisation; the acute patient with potential for recovery; and the patient with degenerative disease Respiratory, communication, cognitive and orthotic management Medical investigations and drug treatments A glossary of terms and abbreviations

This book is for therapists involved in exercise therapy for the prevention and treatment of disease. It covers exercise assessment, current prescription guidelines, precautions, exercise design and clinical case studies. The book also includes exercises to increase strength, power, local muscle endurance, range of movement and aerobic capacity and will be relevant to all areas of therapy practice. In addition to the general guidelines, considerations for exercise groups and exercise at home as well as exercise in special patient populations are addressed. This allows therapists who are expert in one area to become familiar with exercise prescription in another. The book underpins therapeutic exercise in general and also addresses specific considerations for particular clinical situations within current guidelines and practical considerations. Underpinning exercise physiology

Physical principles of exercise design Guidelines for exercise training Clinical exercise prescription Limitations to exercise in common conditions Example case studies

Neurological Assessment is a quick reference tool to identifying those all important links to pathology and physiology – crucial for efficient clinical reasoning and ultimately better patient care. Based around one potential sub-problem encountered by neurologically-impaired patients, each assessment chapter begins with a Summary Bite and then provides photographic guidance on how to examine and define the problem with an explanation as to why it is important to assess it. All sections give detailed reasoning on any possible findings from the assessment technique and an example of how to record the procedure. Blank notes areas throughout encourage the clinician to reflect on the technique carried out and to consider the overall impression from the patient, so facilitating the process of clinical reasoning. Part of the Physiotherapist's Toolbox Series – unlock your key skills! Perfect for use on placement and in the clinic. Highly illustrated with clear step-by-step guidance Includes five main pathologies and basic neuroanatomy to support clinical reasoning Primarily aimed at guiding clinical assessment Hints, Tips and Caution boxes provide easy to digest small packages of information essential to clinical practice All sections follow the same structure and format for ease of use Spiral-binding allows for easy, lie-flat reference

Whatever the practice setting—acute care, rehabilitation, outpatient, extended care, or in a school—turn to this handy guide to the neurological examination. It covers all of the common neuromuscular conditions, disorders, and diseases you might encounter in patients throughout their lifespans. Thumb tabs and nearly 240 illustrations insure you can find just what you're looking for.

The second edition of the Neurological Physiotherapy Pocketbook is the only book for physiotherapists that provides essential evidence-based information in a unique and easy-to-use format, applicable to clinical settings. Written by new international editors and contributors, this pocketbook provides quick and easy access to essential clinical information. Pocketbook size for when out on clinical placement or working in clinical practice Revised and brand new chapters on neurological rehabilitation and essential components Concentrates on the six most common conditions: including stroke, traumatic brain, and spinal cord injury Key messages highlighted for assessment, treatment, and measurement of the most common neurological conditions

Starting a placement or rotation in an unfamiliar clinical area is exciting but can be daunting. CLINICAL CASE STUDIES IN PHYSIOTHERAPY provides invaluable advice and practical guidance on cases and problems encountered on a daily basis allowing you to work with ease and confidence. By adopting a problem solving approach to the cases through the use of questions and answers, the authors will help you to think constructively about each case within all the key specialities of physiotherapy. Starting a placement or rotation in an unfamiliar clinical area is exciting but can be daunting. CLINICAL CASE STUDIES IN PHYSIOTHERAPY provides invaluable advice and practical guidance on cases and problems encountered on a daily basis allowing you to work with ease and confidence. By adopting a problem solving approach to the cases through the use of questions and answers, the authors will help you to think constructively about each case within all the key specialities of physiotherapy. Hints and tips to get you ready for clinical placement How to secure your first physiotherapy post Case studies in the following clinical areas: respiratory, orthopaedics, neurology, musculoskeletal out-patients, care of the elderly, mental health and womens health Cases covering paediatrics also included

The second edition of the Neurological Physiotherapy Pocketbook is the only book for physiotherapists that provides essential evidence-based information in a unique and easy-to-use format, applicable to clinical settings. Written by new international editors and contributors, this pocketbook provides quick and easy access to essential clinical information.

A solution-oriented synopsis of the majority of issues faced in the on-call setting, such as communication, assessment of the patient, problem identification and treatment.

This valuable clinical reference alerts practitioners to potentially serious indicators of pathology in their patients, such as cancer, tuberculosis (TB), or other conditions. With a fresh approach to the subject, it presents an hierarchy of red flags, an index of suspicion, discussion of red herrings, "3D thinking," and conditional probabilities intended to assist with clinical reasoning. It's an ideal, on-the-spot resource for anyone involved in the care of patients with musculoskeletal conditions. The book's small, portable size makes it ideal for reference in any practice setting. Presents information in an accessible, at-a-glance format. The unique red flag hierarchy assists with clinical reasoning. Index of Suspicion highlights the most likely conditions indicated by specific red flags. Discussion of 3D thinking encourages clinicians to look beyond immediate symptoms to find the underlying cause of a problem. Discussion of red herrings describes how to approach indicators that may mislead a diagnosis. Information on the concept of conditional probabilities helps practitioners make informed clinical decisions.

Combining 25 years of clinical, research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor

tasks strength training contracture management pain management respiratory management cardiovascular fitness training Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.
