the lay reader and the professional alike, this book can be turned to for the answer to how scientists learned to measure the speed of light, or consulted for neat, careful summaries of topics as complicated as quantum field theory and as vast as the universe. The entries, each written by a noted scholar and edited by J. L. Heilbron, Professor of History and Vice Chancellor, Emeritus, University of California, Berkeley, reflect the most up-to-date research and discuss the applications of the scientific disciplines to the wider world of religion, law, war, art and literature. No other source on these two branches of science is as informative or as inviting. Thoroughly cross-referenced and accented by dozens of black and white illustrations, the Oxford Guide to Physics and Astronomy is the source to turn to for anyone looking for a quick explanation of alchemy, x-rays and any type of matter or

Written with the needs and goals of a novice researcher in mind, this fully updated Third Edition of *Designing Surveys* by Johnny Blair, Ronald F. Czaja, and Edward A. Blair provides an accurate account of how modern surveys are actually designed and conducted. Much more than a "how-to" guide, this up-to-date and accessible book presents the material in a social science context and teaches readers to think through decisions about sample design, questionnaire development, and data collection, rather than simply following prescriptive advice that may not be appropriate to particular practical situations. In addition to providing examples of alternative procedures, *Designing Surveys* shows how classic principles and recent research guide decision-making—from setting the

basic features of the survey design to implementing instrument development, testing, and data collection. The new edition covers new developments in data collection technologies, provides a more comprehensive treatment of questionnaire development and pretesting, and includes completely new chapters on sample design and selection.
