Rapid Assessment Process is the first introduction to the RAP group of ethnographic methods and techniques that provide field-based research findings for policymakers and program planners. Prepared by an international development professional, it provides clear guidelines on producing high quality research in a fraction of the time taken by traditional ethnography. Visit our website for sample chapters!

Practitioners in need of timely results for program and policy planning—and students looking for realistic research projects—will find solutions in Rapid Qualitative Inquiry (RQI), a team-based, applied research method designed to quickly develop an insider's perspective on and preliminary understanding of complicated “on-the-ground” situations. In this accessible field guide to RQI, James Beebe provides an introduction to research that substitutes teamwork for long-term fieldwork; uses iterative data collection, data analysis, and additional data collection; triangulates data from multiple sources; and applies techniques and concepts from ethnography and case study research. Extensive examples make clear that “rapid” does not

mean “ rushed ” and that rigorous RQI depends upon flexibility rather than an arbitrary list of techniques. Throughout, Beebe ’ s clear prose guides interdisciplinary readers through the process, promise, and potential pitfalls of RQI.

This book provides a practical guide to understanding and conducting rapid ethnographic assessments (REAs) with an emphasis on their use in public health contexts. This team-based, multi-method, relatively low-cost approach results in rich understandings of social, economic, and policy factors that contribute to the root causes of an emerging situation and provides rapid, practical feedback to policy makers and programs. Using real-world examples and case studies of completed REAs, Sangaramoorthy and Kroeger provide readers with a logical, easy-to-follow introduction into key concepts, principles, and methods of REAs, including interview and observation techniques, triangulation, field notes and debriefing, theoretical saturation, and qualitative analysis. They also provide a practical guide for planning and implementing REAs and suggestions for transforming findings into written reports and actionable recommendations. Materials and detailed tools regarding the conduct of REAs are designed to help readers apply this method to their own research regardless of topic or discipline. REA is an applied approach that can facilitate collaborative work with communities and become a catalyst for action. Rapid Ethnographic Assessment will appeal to professionals and researchers interested in using REAs for research efficiency and productivity as well as action-oriented and translational research in a variety of fields and contexts.

Wetland and Stream Rapid Assessments: Development, Validation, and Application describes the scientific and environmental policy background for rapid wetland and stream assessments, how such assessment methods are developed and statistically verified, and how they can be used in environmental decision-making—including wetland and stream permitting. In addition, it provides several case studies of method development and use in various parts of the world. Readers will find guidance on developing and testing such methods, along with examples of how these methods have been used in various programs across North America. Rapid wetland and stream functional assessments are becoming frequently used methods in federal, state and local environmental permitting programs in North America. Many governments are interested in developing new methods or improving existing methods for their own jurisdictions. This book provides an ideal guide to these initiatives. Offers guidance for the use and evaluation of rapid assessments to developers and users of these methods, as well as students of wetland and stream quality. Contains contributions from sources who are successful in academia, industry and government, bringing credibility and relevance to the content. Includes a statistically-based approach to testing the validity of the rapid method, which is very important to the usefulness and defensibility of assessment methods.

The first text to examine the use of qualitative research methods in health economics. It introduces students to the methods and demonstrates their application in case studies.

In today's time-pressured managed care environment, it is important for clinicians to quickly identify the nature of a patient's problem and initiate treatment. With thousands of psychological instruments available, this can often be difficult. This book offers a form of psychological assessment "triage." It eliminates the guesswork and helps psychologists quickly select, administer, and interpret psychological tests.

Part of the JONES AND BARTLETT SERIES IN BIOMEDICAL INFORMATICS As the number of healthcare organizations beginning to implement clinical information systems grows, the number of unanticipated and unintentional consequences inevitably increases as well. While existing research suggests that much good can come from clinicians entering orders directly, errors or other unintended consequences related to technology may arise. Ideal for both clinicians and information technology professionals, Clinical Information Systems: Overcoming Adverse Consequences helps fledgling organizations better prepare for the inevitable challenges and obstacles they will face upon the implementation of such systems. Based on the research and findings from the Provider Order Entry Team from the Oregon Health & Science University, this book discusses the nine categories of unintended adverse consequences that occurred at many of the leading medical centers during their implementation and maintenance of a state-of-the-art clinical information system. It goes on to present the best practices they identified to help organizations overcome these obstacles.

Many school buildings across America are falling apart due to age or lack of maintenance. Others are outmoded and do not meet the needs of modern educational programs and curricula. Unfortunately, school administrators and boards of education have found it increasingly difficult to obtain the funding necessary to correct facility problems in their districts. However help is at hand in the third edition of a popular title originally published in 1999. Holt updates the status of school facilities in the U.S. and provides new information on the relationship between school climate and student achievement. New to this edition is a discussion of the importance of technology in school bond issues and construction. The nuts and bolts of securing the funding for facility construction, a component of the building process usually overlooked in training administrators, are clearly outlined in chapters that begin with a look at the problem of aging schools and follow through the planning and project development phases to the bond campaign and election day. Filled with tips, checklists, and insights on the details from experienced school leaders, this is the perfect guide to consult every step on the way to victory.

Rapid ethnographies are used in a wide range of fields to speed up research quickly and effectively. This book is the first practical guide to rapid ethnographies, helping readers to improve skills in the design, implementation, dissemination and use of findings generated through rapid ethnographic research. It gives advice and guidelines for carrying out rapid and rigorous research and provides details of tools used in the field. Vignettes reflecting on the author's research are included throughout, including observations on research carried out during the COVID-19 pandemic, to highlight how challenges of conducting rapid ethnographies can be overcome. Case studies across a range of subjects are also included, to demonstrate how rapid ethnographies can be applied in practice. With its useful tools and easy-to-read format, it will be used by teachers and students, as well as researchers wanting to successfully implement rapid ethnographies in their own work.
