Telepractice in Audiology provides practical information to audiologists to enable the development and delivery of a successful telepractice program. Specifically, the text discusses the technological requirements (e.g., videoconferencing equipment, remote programming software options, Internet connections, etc.), applications and models of service delivery in audiology, policy and regulatory issues, as well as future directions in the field. The use of telepractice technology, specifically the Internet and remote programming software, has the potential to improve equity of access to services and reduce the burden placed on families. Program reports, outcomes, and publications that are emerging demonstrate the ability to offer sophisticated audiological assessments with reliable outcomes. This text provides the knowledge and skills required to implement a telepractice program that could provide a range of audiological services from diagnostics to intervention and habilitation/rehabilitation. Further, different models of service delivery are presented, thus demonstrating the flexibility of a telepractice approach. Telepractice in Audiology is a useful resource for practicing clinicians as well as students training to be audiologists. In addition, teachers of the deaf, speech-language pathologists, IT support persons, and other individuals interested in the application of, or endeavoring to implement, teleaudiology programs will also benefit from this text.

Tele-AAC: Augmentative and Alternative Communication Through Telepractice is the first comprehensive resource guide to Tele-AAC. Tele-AAC is the use of telepractice specifically for providing services to individuals using augmentative and alternative communication (AAC). This text establishes Tele-AAC as a new service delivery model and promotes safe, efficacious, evidence-based, and ethical telepractice for individuals who need AAC systems. The goal is to provide readers with fundamental information about policy and service delivery of AAC services via telepractice to enable clinical practice. The text details the specific technical components unique to Tele-AAC service delivery, and how the technology, personnel, and service delivery practices may vary across settings and populations. It offers didactic and case-based content for speech-language pathologists across all levels, from introductory to advanced. Chapters are included that clarify and define the term Tele-AAC, highlight the procedures used while providing assessment and intervention via Tele-AAC, identify ethical and cultural considerations while providing Tele-AAC, and demonstrate its application in a variety of settings. The content has been enriched by the input and knowledge offered by leaders from both telepractice and AAC disciplines, and offers readers the right combination of foundational information and principles to help form a base of understanding for practitioners engaging in Tele-AAC. The field of Tele-AAC is evolving and will transform as the technology changes and advances. This text provides a threshold of understanding from which the field and practitioners can grow.
