I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

The Global Monitoring Report 2014/2015 will, for the first time, monitor and report on the World Bank Group's twin goals of ending extreme poverty by 2030 and boosting shared prosperity, while continuing to track progress toward the Millennium Development Goals (MDGs). This Global Monitoring Report examines how a select set of policies in the areas of human capital and the environment can create jobs and make development more inclusive and sustainable, while highlighting how social assistance policies can help end poverty and improve growth prospects. It discusses most of these issues across a full spectrum of countries. This means the Report not only addresses low- and middle-income countries but also, for the first time, includes a discussion of high-income countries as well. The Report will contain quantitative information about the World Bank Group's twin goals: It will provide an assessment on how far the world has to go to end extreme poverty by 2030 and how much of prosperity has been shared with the bottom 40 percent of a country's population. The report is prepared in collaboration with the International Monetary Fund (IMF) and the Organization for Economic Co-operation and Development (OECD).

An updated reference for power and sail boaters surveys the latest developments in safety systems, marine electronics, radar, and communications, and federal laws and regulations, and includes information on tides, currents, weather, and navigation.

This book provides insights on a broad spectrum of renewable and sustainable energy technologies from the world ' s leading experts. It highlights the latest achievements in policy, research and applications, keeping readers up-to-date on progress in this rapidly advancing field. Detailed studies of technological breakthroughs and optimizations are contextualized with in-depth examinations of experimental and industrial installations, connecting lab innovations to success in the field. The volume contains selected papers presented at technical and plenary sessions at the World Renewable Energy Congress, the world's premier conference on renewable energy and sustainable development. Held every two years, the Congress provides an international forum that attracts hundreds of delegates from more than 60 countries.

This book discusses the expertise, skills, and techniques needed for the development of new materials and technologies. It focuses on finite element and finite volume methods that are used for engineering simulations, and present many state-of-the-art applications and advances to highlight these methods ' importance. For example, modern joining technologies can be used to fabricate new compound or composite materials, even those formed from dissimilar component materials. These composite materials are often exposed to harsh environments, must deliver specific characteristics, and are primarily used in automotive and marine technologies, i.e., ships, amphibious vehicles, docks, offshore structures, and even robots. To achieve the desired material performance, computer-based engineering tools are widely used for simulation, data evaluation, and design processes.
