Download Free Introduction To Mediation Moderation And Conditional Process Analysis A Progressive Approach

Moderation is a way to check whether that third variable influences the strength or direction of the relationship between an independent and dependent variable. An easy way to remember this is that the moderator variable might change the strength of a relationship from strong to moderate, to nothing at all.

meaning that “mediation is moderated”.
When a or b is moderated, it is sensible
then to estimate “conditional indirect
effects”—values of indirect effect
conditioned on values of the moderator
variable that moderates a and/or b.
Direct effects can also be conditional.
