Some pressure vessel codes use a design margin of 3^4 times the material strength required at the design pressure (ASME 1999, ASME 2013). The vessel is also typically hydrotested at a pressure of 1.3-1.5 times the MAWP. Other boiler and pressure vessel codes will use similar concepts but may have different design margins.

Basic data required by pressure vessel design engineer. It will be important for chemical engineer and vessel design engineer to communicate very closely (Towler and Sinnott, 2013):

1. Vessel function
2. Process materials and services (corrosion,
