Probability Practice Problems With Solutions

Probability Questions with Solutions. Tutorial on finding the probability of an event. In what follows, S is the sample space of the experiment in question

and E is the event of interest. n(S) is the number of elements in the sample space S and n(E) is the number of elements in the event E.

Probability Questions with Solutions

1. B: On a six-sided die, the probability of throwing any number is 1 in 6. The probability of throwing a 3 or a 4 is double

that, or 2 in 6. This can be simplified by dividing both 2 and 6 by 2. Therefore, the probability of throwing either a 3 or 4 is 1 in 3. 2.

Probability Practice Problems - Test Prep Review

As the probability of drawing a red ball is twice than the others, let's take them as 12. So the total number of balls will be 36.

Probability of drawing the 1st red: 12/36
Probability of drawing the 2nd red: 10/34
Combined probability
= 12/36 X 10/34 =
10/102. 8. B

Solution : Let "A", "B" and "C" be the events of solving problems by each students respectively. $P(A) = 1/3$, $P(B) = 1/4$ and

P(C) = 1/5 (i) What is the probability that the problem is solved?

P(Problem solved) = P(At least one solving) = 1 - P(None solving the problem) = 1 - P(A' n B' n C') = 1 - P(A') · P(B') · P(C')
