Section What Is A Solution

In chemistry, a solution is a special type of homogeneous mixture composed of two or more substances. In such a mixture, a solute is a substance dissolved in another substance, known as a solvent. The mixing process of a solution happens at a scale where the effects of chemical polarity are involved, resulting in interactions that are specific to solvation. The solution usually has the state of the solvent when the solvent is the larger fraction of the mixture, as is commonly the case. One impor

Process solution is used when no one is in the critical section, and someone wants in. In bound waiting solution, after a process makes a request for getting into its critical section, there is a limit for how many other processes can get into their critical section. Peterson's solution is widely used solution to critical section problems.

In Mathematics, the bisection method is a straightforward technique to find numerical solutions of an equation with one unknown. Among all the numerical methods, the bisection method is the simplest one to solve the transcendental equation. In this article, we will discuss the bisection method with solved problems in detail.

Peterson's algorithm (or Peterson's solution) is a concurrent programming algorithm for mutual exclusion that allows two or more processes to share a single-use resource without conflict, using only shared memory for communication. It was formulated by Gary L. Peterson in 1981. While Peterson's original formulation worked with only two processes, the algorithm can be generalized for more than two.

Solution to the Critical Section Problem. The critical section problem needs a solution to synchronize the different processes. The solution to the critical section problem must satisfy the following conditions – Mutual Exclusion. Mutual exclusion implies that only one process can be inside the critical section at any time.

The critical section problem is used to design a set of protocols which can ensure that the Race condition among the processes will never arise. In order to synchronize the cooperative processes, our main task is to solve the critical section problem. We need to provide a solution in such a way that the following conditions can be satisfied.
