These time value of money problems include finding the future value of a lump sum, the future value of a series of payments, and the payment amount needed to achieve a future value. Let's dive into each of these problems with specific time value of money examples.

What You Should Know About The Time Value of Money

The time value of money is a basic financial concept that holds that money in the present is worth more than the same sum of money to be received in the future. This is true because money that you have right now can be invested and earn a return, thus creating a larger amount of money in the future. (Also, with future money, there is the additional risk that the money may never actually be received, for one reason or another.)

Time Value of Money - How to Calculate the PV and FV of Money

The time value of money (TVM) is the concept that money you have now is worth more than the identical sum in the future due to its potential earning capacity. This core principle of finance holds...

Time Value of Money (TVM) Definition - investopedia.com

Time Value of Money Money today is usually worth more than money tomorrow. This is why the lottery's lump sum payments are less than the sum of the amount of money that you'd get in payments over time. One way to think about the difference between the two is to look at the lump sum amount as your actual winnings.

Lottery Payouts: Lump Sums vs. Annuities | Pocketsense
